Assignment 2 (Question 2)

* Grid 19

-ve = Fill
+ve = Cut

Points	Current elev (m)	Proposed elev (m)	Delta (Δ)m
E3	105.3	104.1	1.2
F3	104.4	104.1	0.3
F4	104.2	104.1	0.1
E4	104.25	104.1	0.15

$$\Sigma \Delta 19 = 1.75$$

$$\Delta_{\text{average}} = \frac{\Sigma \Delta 19}{4}$$

$$= \frac{1.75}{4} = 0.4375 \text{ m}$$

$$= 0.44 \text{ m (2 decimal place)}$$

$$\therefore \text{Volume} = 10 \text{ m} \times 10 \text{ m} \times (0.4375) \text{ m}$$

$$= 43.75 \text{ m}^3 \rightarrow (\text{cut})$$

* Grid 32

Points	Current Elev (m)	Proposed Elev (m)	Delta (Δ) m
DS	103.8	104.1	-0.3
ES	104.45	104.1	0.35
E6	104.2	104.1	0.1
D6	103.3	104.1	-0.8

$$\Sigma \Delta = -0.65$$

$$\text{Avg } \Delta = \frac{\Sigma \Delta}{4}$$

$$= \frac{-0.65}{4}$$

$$= -0.1625 \rightarrow -0.16 \text{ m}$$

$$\therefore \text{Volume} = 10 \text{ m} \times 10 \text{ m} \times (-0.1625) \text{ m}$$

$$= -16.25 \rightarrow (\text{Fill})$$

* Assume

3	C	D	E	F
	103.3	104.3	105.3	104.4
	17	18	19	
4	103.3	104	104.8	104.2
	24	25	26	
5	103.1	103.6	104.6	105.3
	31	32	33	
6	102.8	103.3	104.2	104.7

Summary and findings:

During assignment 2, the provided file illustrates the progression of the contour maps. I conducted various analyses, including determining square numbers, square areas, proposed elevations at each corner of the grid, and estimating existing elevations at each corner of the grid based on the figures. Additionally, I calculated the difference in elevation at each corner of the grid. After obtaining these values, I computed the average fill or cut elevation for each grid box and/or each corner of the grid. Using a spreadsheet, I calculated the net volume, which amounted to 20 cubic meters.
